

Seeking Cooperation Opportunities in Wearable Cameras and / or Edge Computing

The US Consulate General – Hong Kong and Macau has receiving enquiry from US company. Seekr is Hong Kong's #1 compact AI wearable for 200K visually-impaired and 1.5M elderly population offering them access to information in new settings and helping them navigate independently and safely. It works with Hong Kong's 7 largest blind NGOs, elderly care homes, hospitals and rehabilitation schools to enhance their quality of life. It is currently in the process of iterating the product further to serve more of the Asian market and bringing our solution to the US market.

Since hardware is a key component of the product offering, it is particularly interested in identifying manufacturing partners to scale the operations. It is particularly looking for manufacturing partners with expertise in wearable cameras and/or edge computing.

For company details please visit the official website: <https://seekr.hk/>.
